Course Objective:

Hi there! Welcome to Environmental Economics, a field of economics concerned with the impact of the economy on the environment and the appropriate methods to regulate economic activity so as to maintain the fragile balance between environmental, economic and social objectives. Selected topics in environmental economics will be reviewed to illustrate the application of economic principles to environmental decision making. This course is designed to equip the student to appreciate the economic arguments central to resource allocation, usage and their environmental implications. Throughout this course, we will examine the difficult trade-offs that environmental issues entail and how proper policies need to be formulated both at the national and international levels to rectify current practices that harm the environment. We will outline how analytical tools of economics can be used to understand environmental issues and provide the foundations for innovative solutions.

Policy Regarding Attendance, Exams and Home-works:

Attendance is compulsory in this class. There will be grade penalties for unexcused absences at the discretion of the instructor. The examinations will be a combination of True or False, graphical/numerical problems and short essays. There will be two, in-class mid term exams, each worth 20% of the course grade. The Final exam, with similar format as the other exams, is worth 30% and will be cumulative. Two homework assignments will be given in the semester and together, will be worth 20% of the grade. Any unverified absence during a midterm or Final will result in a zero for that exam. Attendance and class performance will account for 10% of the course grade. Late submission of home-works will result in a 20% penalty. Late assignments will not be accepted after graded home-works have been returned to students. The exam dates have been included in the syllabus so please plan accordingly.
