

Report to Users

Roberto G. Gutierrez

Director of Statistics
StataCorp LP

2006 North American Stata Users Group Meeting, Boston

- 1 Stata Press
- 2 Stata 9
- 3 New development
 - Stata 9.1
 - Stata 9.2 - Mata structures
 - Stata 9.2 - work faster
- 4 Statalist

Most active year ever

- Stata Journal indexed
- Two revised editions of existing books
- Four new books published
- Seven books in progress

Stata Journal

- 6th year of publication
- Special edition - Stata 20th anniversary
- Now indexed

Thomson Scientific citation indexes

- Science Citation Index Expanded
- CompuMath Citation index

Stata Journal

- 6th year of publication
- Special edition - Stata 20th anniversary
- Now indexed

Thomson Scientific citation indexes

- Science Citation Index Expanded
- CompuMath Citation index

More than doubled number of books published

Revised editions, 2005

- **Regression Models for Categorical Dependent Variables Using Stata, 2nd Edition**
by J. Scott Long, Jeremy Freese
- **Maximum Likelihood Estimation with Stata, 3rd Edition**
by William Gould, Jeffrey Pitblado, William Sribney

More than doubled number of books published

Revised editions, 2005

- **Regression Models for Categorical Dependent Variables Using Stata, 2nd Edition**
by J. Scott Long, Jeremy Freese
- **Maximum Likelihood Estimation with Stata, 3rd Edition**
by William Gould, Jeffrey Pitblado, William Sribney

More than doubled number of books published

New books, 2005

- **Data Analysis With Stata**
by Ulrich Kohler and Frauke Kreuter
- **Multilevel and Longitudinal Modeling Using Stata**
by Sophia Rabe-Hesketh and Anders Skrondal
- **A Gentle Introduction to Stata**
by Alan Acock
- **An Introduction to Stata for Health Researchers**
by Svend Juul

Forthcoming books, 2006

- **An Introduction to Modern Econometrics Using Stata**
by Christopher F. Baum
- **Generalized Linear Models and Extensions, 2nd Edition**
by James Hardin, Joseph Hilbe
- **An Introduction to Forecasting Time Series Using Stata**
by Robert Yaffee
- **The 123s of Survey Statistics with Stata**
by Nicholas Winter
- **Applied Microeconometrics Using Stata**
by A. Colin Cameron, Pravin K. Trivedi

Forthcoming books, 2007

- **A Guide to Stochastic Frontier Models: Specification and Estimation**
by Subal Kumbhakar, Hung-Jen Wang
- **Data Management Using Stata**
by Michael Mitchell

- Released April 2005
- 20th anniversary
- Largest release ever

Stata 1, January 1985

- 44 commands
- 175 pages of documentation

Stata 8, January 2003

- over 600 commands
- 4652 pages of documentation

Stata 9, April 2005

- over 700 commands including new matrix language Mata
- 6413 pages of documentation

Stata 1, January 1985

- 44 commands
- 175 pages of documentation

Stata 8, January 2003

- over 600 commands
- 4652 pages of documentation

Stata 9, April 2005

- over 700 commands including new matrix language Mata
- 6413 pages of documentation

- 175 pages of documentation

Stata 8, January 2003

- over 600 commands
- 4652 pages of documentation

Stata 9, April 2005

- over 700 commands including new matrix language Mata
- 6413 pages of documentation

Ongoing development

- Continued release-as-we-go strategy
- Stata 9.1
- Stata 9.2
 - Mata structures
 - Work faster

- Multiple log files
- Faster survey linearization
- More stored estimation results
- New Mata functions (permutation, string, regular expression, binary I/O)
- Sized PNG and TIFF exported graphs
- `adoupdate`
- And more...

Mata structures

Set of variables tied together under a single name

```
struct structname {  
    declaration(s)  
}
```

Example

```
struct mystruct {  
    real scalar    n1, n2  
    real matrix    x  
}
```

Mata structures

Set of variables tied together under a single name

```
struct structname {  
    declaration(s)  
}
```

Example

```
struct mystruct {  
    real scalar    n1, n2  
    real matrix    x  
}
```

Mata structures

```
struct myresult {
    real scalar    yoverx
    real scalar    xovery
}

struct myresult scalar myfunc(real scalar x, real scalar y)
{
    struct myresult scalar    res

    res.yoverx = y/x
    res.xovery = x/y

    return(res)
}

...
struct myresult scalar results
...

results = myfunc(3, 4)
```

You can have vectors and matrices of structures

```
struct mystruct scalar    t
struct mystruct vector    t
struct mystruct rowvector t
struct mystruct colvector t
struct mystruct matrix    t

t[2,3].n1
```

Structures can contain vectors and matrices

```
t[2,3].x[9,2]
```

You can have vectors and matrices of structures

```
struct mystruct scalar    t
struct mystruct vector    t
struct mystruct rowvector t
struct mystruct colvector t
struct mystruct matrix    t

t[2,3].n1
```

Structures can contain vectors and matrices

```
t[2,3].x[9,2]
```

Structures can contain other structures

```
struct myresult {
    real scalar    yoverx
    real scalar    xovery
}

struct somerresults {
    struct myresult scalar res1, res2
}

...
struct somerresults scalar myres
...

myres.res1 = myfunc(3, 4)
myres.res2 = myfunc(5, 6)
```

Advantages of structures

- Organization
- Convenience (return multiple results)
- Abstraction (handles)

Work faster – work in parallel

- new 'flavor' of Stata capable of performing symmetric multiprocessing (SMP)
- same capabilities as Stata/SE, but faster due to parallelization of central routines
- for dual core, multicore, or multiprocessor computers
- <http://www.stata.com/statamp/>

Difference between 'processor' and 'core'

- processor: central processing unit, or CPU
- core: computation engine of a CPU with integer and floating point processing units

Work faster – work in parallel

- new 'flavor' of Stata capable of performing symmetric multiprocessing (SMP)
- same capabilities as Stata/SE, but faster due to parallelization of central routines
- for dual core, multicore, or multiprocessor computers
- <http://www.stata.com/statamp/>

Difference between 'processor' and 'core'

- processor: central processing unit, or CPU
- core: computation engine of a CPU with integer and floating point processing units

Design requirements

- 100% compatible with Stata/SE, Intercooled Stata, and Small Stata
- No end-user programming necessary to obtain speed ups
- No changes necessary to do-files, user-written programs, or datasets
- Priority given to estimation commands

Supports 2 to 32 processors or cores on

- Macintosh OSX (Intel)
- 32-bit Windows
- 64-bit Windows (x86-64)
- 64-bit Windows (Itanium)
- 32-bit Linux
- 64-bit Linux (x86-64)
- 64-bit Linux (Itanium)
- 64-bit Solaris (Sparc)
- 64-bit Solaris (x86-64)

Perfection, in theory

- 100% efficiency is twice as fast on 2 processors/cores
- Speed doubles for every doubling of number of processors
- Execution time halves for every doubling of number of processors

Amdahl's Law

F : sequential/non-parallelizable fraction

N : number of processors

Maximum speed up: $\frac{1}{F + \frac{1-F}{N}}$

Perfection, in theory

- 100% efficiency is twice as fast on 2 processors/cores
- Speed doubles for every doubling of number of processors
- Execution time halves for every doubling of number of processors

Amdahl's Law

F : sequential/non-parallelizable fraction

N : number of processors

Maximum speed up: $\frac{1}{F + \frac{1-F}{N}}$

How much faster?

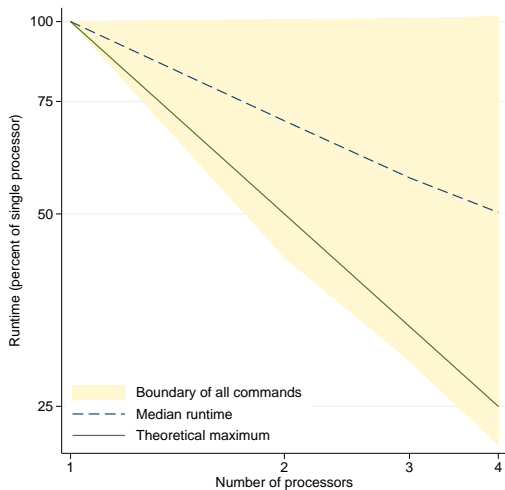

- Median speed up (overall)
 - 72% efficiency
 - 2 CPUs: 1.4
 - 3 CPUs: 1.75
 - 4 CPUs: 2.0
- Median speed up (estimation commands)
 - 88% efficiency
 - 2 CPUs: 1.7
 - 3 CPUs: 2.3
 - 4 CPUs: 2.8
