

# Bede the Venerable

- Born c.672-3
- Died 735
- Wrote *The Ecclesiastical History of the English Church and People*

- The Oxford English Dictionary defines a clausula as ‘ the close or end of a period, especially one in ancient or medieval Latin having a definable cadence.’ (*OED*, 2nd edition, 1989)

# Clausulae forms

- Metrical, based on syllable length
- *cursus mixtus*, where metre and stress accent coincide
- *cursus*, which is stress accent (or purely rhythmical) only

# Metrical forms

- Ēssē cōrōnāndum
- fōrmā vērbōrum

# *Cursus mixtus* forms

- Planus: /xx/x tractibus trudit
- tardus: /xx/xx fidens pernicious
- velox: /xx/x/x agminibus circumsaeptus
- medius: /x/xx exercere studeat
- trispondaicus: /xxx/x iaculorum catapulta
- dispondaicus: /xxx/xx feliciter perfruitur

# *Cursus* forms

- Tractibus trudit = pp2
- fidens pernicious = p4pp
- agminibus circumsaeptus = pp4p
- exercere studeat = p3pp
- iaculorum catapultas = p4p
- feliciter perfruitur = pp4pp

# Methods

- Oberhelman: uses control texts with known rhythmical or non-rhythmical properties
- Janson: uses internal comparison

# Sample

- 367 sentence endings taken from Bede's homilies
- Quotations from other authors were excluded
- Short sentences, and sentences which ended in a possible elision were also excluded
- 'esse educatum' might be an elision

# Final cadences in Bede

	1	p	pp	Total
6p	0	2	3	5
5p	0	5	1	6
5pp	1	2	0	3
4p	3	39	14	56 *
4pp	1	61	11	73
3p	5	94	31	130
3pp	3	20	12	35
2	17	9	24	50
1	0	9	0	9
<b>Total:</b>	<b>30</b>	<b>241 *</b>	<b>96</b>	<b>367</b>

# Producing the expected value

$$241/367 = 0.656$$

$$56/367 = 0.152$$

$$0.656 \times 0.152 = 0.0997$$

$$0.0997 \times 367 = 37$$

John	84	259	356	153	45	37	23	1260

# Bede vs. non-rhythmical authors

$\chi^2$  test on *planus*, *tardus* and *velox* forms in Descartes, Polydore and Cicero against Bede:\*

```
. tabi 1665 240 \1335 127, chi2 expec
```

row	1	2	Total
1	1,665	240	1,905
	1,697.4	207.6	1,905.0
2	1,335	127	1,462
	1,302.6	159.4	1,462.0
Total	3,000	367	3,367
	3,000.0	367.0	3,367.0

Pearson  $\chi^2(1) = 13.0325$       Pr < 0.0005

# Bede vs. rhythmical authors

$\chi^2$  test on *planus*, *tardus* and *velox* forms in John against Bede:

. tabi 1037 240 \223 127, chi2 expec

row	1	2	Total
1	1,037	240	1,277
	988.9	288.1	1,277.0
2	223	127	350
	271.1	78.9	350.0
Total	1,260	367	1,627
	1,260.0	367.0	1,627.0

Pearson chi2(1) = 48.1141      Pr <0.0005

# Bede's rhythmicity

- No significant difference between the frequency of *trispondaicus* forms in Bede and the control texts
- Bede uses significantly more *trispondaicus* forms than Dante and John of Salisbury
- Therefore, Bede used rhythmical forms.

# Metrical forms

- Cretic spondee: LsLsx
- dicretic: LsLLsx
- ditrochee: xxxLsLx
- cretic-tribrach: LsLssx
- dispondee: LLLx
- spondee-cretic: LLLsx
- cretic-iambus: LssLsx

# Bede's metrical forms

- No significant differences were found for Descartes, Polydore, Cicero, Dante & John, after application of the Bonferroni adjustment
- Significant difference (lower) than Gilbert

# Conclusions

- Bede did use some *cursus* rhythms.
- It is unclear whether he used *cursus mixtus* forms.
- The statistical methods used require further refinement; analysing a large corpus of Latin prose may help provide control texts for further analysis
