READING LIST (Fall 2000)

Readings-- The reading material is primarily from journal articles which I will make available. The only book you should buy is:

Andrew Weiss Efficiency Wages

Course format-- The focus of the course is on (1) teaching you a body of literature that labor economist are expected to know and (2) helping you develop the set of skills necessary to write a dissertation. I will try to teach the latter skills through class discussion and a set of exercises. These will include the following:

- Undertake and report on an empirical research project-- Each student will be responsible for developing an ongoing research project. Specific assignments will be given
- Present articles of general interest to the class. These may include articles on the reading list or other articles of general interest.
- Write several referee reports on articles that have been submitted to journals.
- Read the papers by the seven labor economists who are presenting in the Monday seminar series and prepare a one page referee report—We will discuss these papers on the Thursday before the papers are presented.
- Other items as they come up

Grades—Grades will be based on the work described above and on several short problem sets covering the core material. Since you will all be tested on the material in the labor comprehensive exam, there will be no final.

Readings are broken down into three categories

*** Requires detailed understanding.

** Read to understand the question, general methodology and results

- Reference material used in lecture—optional
Other reference material if you are interested in working in this area
