# The SUBSIM Manager package: Version 3.0

Abdelkrim Araar[*]   and   Paolo Verme[†]
June 2015

The Stata package **subsim_man** facilitates the installation and maintenance of the SUBSIM package. This package can be used to install SUBSIM, to check for updates, to read the reference material or to visit the SUBSIM website. Once installed, the user can invoke its dialog box by typing the command: ***db subsim_man***.

- By clicking on the button Install/Update SUBSIM Package, the manager installs for the first time or re-installs SUBSIM using the last updated version.

- By clicking on the button Check for updates, the manager compares the installed version with that of the last updated on the server and displays the information.

- By clicking on the button Check for updates, the manager lunches the machine browser by pointing on the web page that contains a list of SUBSIM basic references.

- By clicking on the button Go to SUBSIM Website, the manager lunches the machine browser by pointing to the home page of the SUBSIM Website.
