

# **dbnomics**

Stata client for DBnomics, the world's economic database

Simone Signore

EIF (European Investment Bank Group), `s [dot] signore [at] eif [dot] org`

2019 London Stata Users Group meeting  
London, September 5–6, 2019

This presentation should not be referred to as representing the views of the European Investment Fund (EIF) or of the European Investment Bank Group (EIB Group). Any views expressed herein, including interpretation(s) of regulations, reflect the current views of the author, which do not necessarily correspond to the views of the EIF or of the EIB Group. Views expressed herein may differ from views set out in other documents, including similar research papers, published by the EIF or by the EIB Group. Contents of this presentation, including views expressed, are current at the date of publication set out above, and may change without notice. - 3 Use cases
- 4 Why should you use `dbnomics`?

## Ways to improve data handling processes in macroeconomic research:

- Simplifying retrieval of economic data from multiple (public) data sources;
- Automatically providing updated data;
- Allowing reproducible results.

**In 2016:** the idea of DBnomics, born out of a partnership between the CEPREMAP and France Stratégie (and the financial support of the Investments for the Future Programme).

### ● **Fred:**

- ▶ Simple user Interface;
- ▶ Archive system (ALFRED);
- ▶ Limited coverage of public data sources (2/3 of the 589,000 series come from the U.S. Census, BLS, BEA, FED);
- ▶ Free, but not open-source.

### ● **Quandl:**

- ▶ Simple user Interface;
- ▶ Wide(r) coverage of public data source (UNO, BIT, national institutes, etc.), but not systematic within each data provider;
- ▶ Free for some services only.

### ● **Datastream:**

- ▶ Heavy user interface;
- ▶ Good (i.e., automatised) updating system, especially for financial series;
- ▶ Costly.

**Goal:** Create a free, *open-source* (and Euro-centric) server to aggregate publicly-available data series provided by national and international statistical institutions.

Four important principles of the project:

- Data series are taken directly from providers and kept unchanged;
- Data series are stored in a tree similar to the provider's;
- Data series are automatically updated via provider-specific functions;
- *Archive system*: each revision of the data series is archived.

### Value added:

- A unique economic database with wide, systematic coverage of economic data (605 million series at present);
- The *free and open-source* nature<sup>1</sup> aims at facilitating the creation of a community:  
<https://forum.db.nomics.world/>.

---

<sup>1</sup>GNU Affero General public License.

# The DBnomics platform

Database coverage to date

Figure 1: Public data providers covered, by quarter

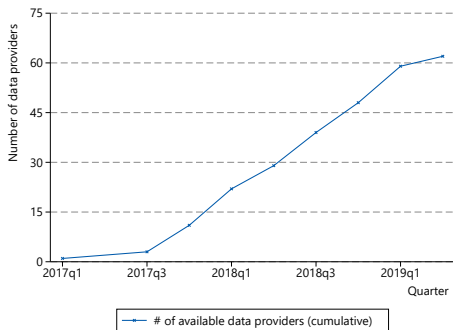

Figure 2: Data providers by geographic scope

## How to use it?

- **A website:** <https://db.nomics.world/> with different search capabilities;
- **A RESTful<sup>2</sup> API** (Application Programming Interface) based on the **JSON** (JavaScript Object Notation) data exchange format: <https://api.db.nomics.world/>;
- **The API allows for automated database access from statistical packages like:**
  - ▶ Python/R;
  - ▶ Julia;
  - ▶ Gretl;
  - ▶ **Stata.**

---

<sup>2</sup>Representational State Transfer, a set of recommendations defining a flexible and lightweight architectural style for machine-to-machine communication (e.g., server to client).

- Stata routine to browse, find and extract DBnomics data series;
- Composed of seven sub-commands, handling the various endpoints of its API;
- Mata back-end to parse JSON responses, using the `libjson` library (Lindsley, 2012b);
- Available from SSC (`ssc install dbnomics`);
- Source code available on [github.com](https://github.com).

- **Explore and search for data across multiple providers:**
  - ▶ Browse available data providers (`dbnomics providers`);
  - ▶ Load the “table of contents” for a provider of interest (`dbnomics tree`);
  - ▶ Search for data across providers (`dbnomics find`).
- **Explore dataset structure, contents and format:**
  - ▶ Browse dataset structure (`dbnomics datastructure`);
  - ▶ Load list of series related to a dataset (`dbnomics series`).
- **Load data into Stata:**
  - ▶ Import data from DBnomics (`dbnomics import`).
- **Show recently updated data** (`dbnomics news`).

# The dbnomics command

## Challenge #1: syntax (1/2)

- The design of `dbnomics` is heavily inspired by `sdmxuse` (Fontenay, 2018) for the sub-command structure and Stata's `freduse` for the handling of metadata;
- **However**, Fontenay's `sdmxuse` relies on the SDMX standard, which conveniently allows to "slice" and filter data through "SDMX masks", e.g.:

```
. sdmxuse data ECB, clear dataset(SAFE) dimensions(H.T2.SME.A.0.0.0.Q4.FFAC..AL.WP)
```

- Not all DBnomics providers support SDMX (many do!);
- How to make the following query Stata-friendly?

```
https://api.db.nomics.world/v21/series?provider_code=ECB&dataset_code=SAFE&limit=500&offset=0&dimensions="REF_AREA":["T2"],"SAFE_QUESTION":["Q4"],"FIRM_SIZE":["SME"],"FIRM_SECTOR":["A"],"FIRM_AGE":["0"],"SAFE_DENOM":["WP"],"SAFE_FILTER":["AL"],"SAFE_ITEM":["FFAC","FEQI"],"FBLN","FLEH","FOVD","FTCR"]
```

# The dbnomics command

## Challenge #1: syntax (2/2)

- **Solution:** turn dimension labels into option names and dimension filters into contents of the options:

```
https://api.db.nomics.world/v21/series?provider_code=ECB&dataset_code=SAFE&
limit=500&offset=0&dimensions={" REF_AREA ": ["T2"], " SAFE_QUESTION ": ["Q4"],
" FIRM_SIZE ": ["SME"], " FIRM_SECTOR ": ["A"], " FIRM_AGE ": ["0"], " SAFE_DENOM ": ["WP"],
" SAFE_FILTER ": ["AL"], " SAFE_ITEM ": ["FFAC", "FEQI", "FBLN", "FLEH", "FOVD", "FTCR"]}
```

```
. dbnomics import, pr(ECB) d(SAFE) REF_AREA (T2) ///
SAFE_QUESTION (Q4) FIRM_SIZE (SME) FIRM_SECTOR (A) ///
FIRM_AGE (0) SAFE_DENOM (WP) SAFE_FILTER (AL) ///
SAFE_ITEM ("FFAC", "FEQI", "FBLN", "FLEH", "FOVD", "FTCR") clear
.....
36 series found and imported
```

- **Advantage:** queries are stored (e.g., in a do-file) in a human-readable format and the command retains a Stata-like syntax.

# The dbnomics command

## Challenge #2: parsing JSON (1/3)

- Can Stata parse the following JSON payload? *Hint: yes.*

```
{
  "_meta": {
    "python_project_name": "DBnomics-API",
    "python_project_version": "0.21.6"
  },
  "series": {
    "data": [
      {
        "Firm age (SAFE)": "All ages included",
        "Firm economic activity (SAFE)": "All sectors",
        "period": [
          "2009-S1",
          "2009-S2",
          ... (omitted)
        ],
        "SAFE question": "Q4. Financing structure",
        "FIRM_SIZE": "SME",
        "series_name": "Half-yearly ...",
        "FIRM_TURNOVER": "0",
        "FIRM_SECTOR": "A",
        "Frequency": "Half-yearly",
        "SAFE answer": "Not applicable to the firm",
        "period_start_day": [
          "2009-01-01",
          "2009-07-01",
          ... (omitted)
        ],
        "FIRM_AGE": "0",
        "series_code": "H.T2.SME.A.0.0.0.Q4.FBLN.N7.AL.WP",
        "Reference area": "Euro area countries ...",
        "SAFE_FILTER": "AL",
        "@frequency": "bi-annual",
        "SAFE_QUESTION": "Q4",
        "SAFE_ITEM": "FBLN",
        "value": [
          3.858787,
          10.14487,
          ... (omitted)
        ],
        "SAFE question related item": "Bank loan",
        "SAFE filter - applicable answer": "Including ...",
        "Firm other breakdowns (ownership, export) (SAFE)": "SAFE",
        "dataset_code": "SAFE",
        "SAFE_DENOM": "WP",

        "REF_AREA": "T2",
        "Denomination in SAFE context": "Weighted ...",
        "provider_code": "ECB",
        "SAFE_ANSWER": "N7",
        "FIRM_OWNERSHIP": "0",
        "dataset_name": "Survey on the Access ...",
        "Firm size (SAFE)": "Small and medium-sized ...",
        "FREQ": "H"
      }
    ],
    "limit": 1,
    "num_found": 36,
    "offset": 0
  }
}
```

# The `dbnomics` command

## Challenge #2: parsing JSON (2/3)

- Lindsley's `insheetjson` unfortunately far too limited to handle DBnomics' JSON;
- Buchanan's `jsonio` offers plenty of capabilities, but requires external dependencies (i.e. the Jackson Java library), a rather laborious set-up and a non-trivial RegEx-based syntax for JSON consumption;
- In line with the project's spirit, I wished to build an open-source tool, minimising the number of necessary external dependencies;
- **Solution?** Lindsley's `libjson` Mata library — more than meets the eye:
  - ▶ Mata's `libjson` class comfortably handles most JSON read operations;
  - ▶ Custom parsing Mata functions (e.g. `json2table`, `fetchjson`) help navigate through and convert JSON payloads;
  - ▶ `dbnomics`'s parsing yields a table structure that replicates the output of DBnomics' own official Python client (`pip install dbnomics`);
  - ▶ On the flip side, `libjson` is not the fastest JSON library out there...
- The command `moos` (Picard and Cox, 2011) deals with the necessary residual string cleanup (e.g. encoding).

# The dbnomics command

## Challenge #2: parsing JSON (3/3)

```
. dbnomics import, pr(ECB) d(SAFE) REF_AREA(T2) SAFE_QUESTION(Q4) ///  
  FIRM_SIZE(SME) FIRM_SECTOR(A) FIRM_AGE(O) SAFE_DENOM(WP) SAFE_FILTER(AL) ///  
  SAFE_ITEM("FFAC", "FEQI", "FBLN", "FLEH", "FOVD", "FTCR") clear  
.....  
36 series found and imported  
  
. browse period-firm_size in 1/20
```

period	period_start_day	value	firm_age_safe	firm_economic_ activity_safe	safe_question	firm_size
2009-S1	2009-01-01	3.858787	All ages included	All sectors	Q4. Financing structure	SME
2009-S2	2009-07-01	10.14487	All ages included	All sectors	Q4. Financing structure	SME

# A brief walk-through

How can `dbnomics` simplify the retrieval of macroeconomic data? (1/4)

- The European Small Business Finance Outlook (ESBFO, Kraemer-Eis *et al.*, 2019) gives a bi-annual snapshot of the access to finance conditions of European SMEs;<sup>3</sup>
- The report compiles vast amount of data from public data sources. For instance, the ESBFO tracks the sources of external financing for Euro area SMEs. Let's use `dbnomics` to find relevant information;

```
. dbnomics find "external financing", clear
Searching for external financing in datasets and series...5 results found.
```

```
+-----+-----+-----+-----+-----+-----+-----+
Type   Provider name      Name                               Code      Nb series  Nb match-g  Indexed at
+-----+-----+-----+-----+-----+-----+-----+
dataset European Central Bank  Survey on the Access to Fina-  SAFE      189501     59565       01sep2019
dataset Banco Central do Brasil V.2 - Balance of current tra-i ei-V.2    6          6           29aug2019
dataset Banque De France    Bank Lending Survey           BLS       187        3           24jul2019
dataset Banque De France    Access to Finance of SMEs     SAFE      4          2           14jun2019
dataset Statistics Canada    Central government operation-b 10100133  24         1           30jul2019
(Click on a highlighted link to load related data)
```

- Looks like our first result hits the mark. However, 189,501 series are probably more than we need, so we first browse the dataset structure in search for useful filters;
- By the way, you can click on the **SAFE** link to directly load the dataset structure.

<sup>3</sup>Small and Medium-sized Enterprises.

# A brief walk-through

How can `dbnomics` simplify the retrieval of macroeconomic data? (2/4)

```
. dbnomics data, pr(ECB) d(SAFE) clear
```

Survey on the Access to Finance of SMEs

```
189501 series found. Order of dimensions: (FREQ.REF_AREA.FIRM_SIZE.FIRM_SECTOR.FIRM
> _TURNOVER.FIRM_AGE.FIRM_OWNERSHIP.SAFE_QUESTION.SAFE_ITEM.SAFE_ANSWER.SAFE_FILTER
> .SAFE_DENOM)
```

- Browsing through the available series, we identify the following as relevant:

```
. (intermediate output omitted)
```

```
. list dimensions-seriesnr if filter > 0, abbrev(50) noobs sep(0)
```

dimensions	values	labels	seriesnr
FIRM_AGE	0	All ages included	116921
FIRM_SECTOR	A	All sectors	131393
FIRM_SIZE	SME	Small and medium-sized enterprises	30639
REF_AREA	U2	Euro area (changing composition)	79854
SAFE_DENOM	WP	Weighted percentage of responses	138041
SAFE_FILTER	AL	Including not applicable responses	149632
SAFE_QUESTION	Q4	Q4. Financing structure	15432
SAFE_ITEM	FBLN	Bank loan	10230
SAFE_ITEM	FEQI	Equity investments in your firm	7579
SAFE_ITEM	FFAC	Factoring	1144
SAFE_ITEM	FLEH	Leasing or hire-purchase	7579
SAFE_ITEM	FOVD	Credit line, bank overdraft or credit cards overdraft	10230
SAFE_ITEM	FTCR	Trade credit	10230

# A brief walk-through

How can `dbnomics` simplify the retrieval of macroeconomic data? (3/4)

- Before downloading the data (and to make sure we are downloading the right stuff), we can create a “shopping cart” of series using the command `dbnomics series`:

```
. dbnomics series, pr(ECB) d(SAFE) SAFE_QUESTION(Q4) SAFE_FILTER(AL) ///  
FIRM_SIZE(SME) FIRM_SECTOR(A) FIRM_AGE(O) SAFE_DENOM(WP) REF_AREA(T2) ///  
SAFE_ITEM("FFAC", "FEQI", "FBLN", "FLEH", "FOVD", "FTCR") clear
```

36 of 189501 series selected. Order of dimensions: ... *(output omitted)*

- We are happy with our selection, we can now proceed to loading the data in memory:

```
. dbnomics import, pr(ECB) d(SAFE) SAFE_QUESTION(Q4) SAFE_FILTER(AL) ///  
FIRM_SIZE(SME) FIRM_SECTOR(A) FIRM_AGE(O) SAFE_DENOM(WP) REF_AREA(T2) ///  
SAFE_ITEM("FFAC", "FEQI", "FBLN", "FLEH", "FOVD", "FTCR") clear
```

```
.....  
36 series found and imported
```

# A brief walk-through

How can dbnomics simplify the retrieval of macroeconomic data? (4/4)

- At last, our chart (Kraemer-Eis *et al.*, 2019, p.18): [download do-file:](#) 

```
/* Download data */
dbnomics import, pr(ECB) d(SAFE) REF_AREA(U2) SAFE_QUESTION(Q4) ///
    FIRM_SIZE(SME) FIRM_SECTOR(A) FIRM_AGE(0) SAFE_DENOM(WP) ///
    SAFE_FILTER(AL) ///
    SAFE_ITEM("FFAC", "FEQI", "FBLN", "FLEH", "FOVD", "FTCR") clear
.....
36 series found and imported

World Bank	<a href="http://www.worldbank.org/">http://www.worldbank.org/</a>	International
World Trade Organization	<a href="https://www.wto.org/">https://www.wto.org/</a>	International

- **A command that adapts to the specificities of each data provider...**
  - ▶ Store queries (e.g., in a do-file) in a human-readable format, using Stata's native option syntax;
- **...requiring minimal dependencies**
  - ▶ `ssc install libjson` and `ssc install moss`;
- **Limitations:**
  - ▶ `dbnomics` is not a bulk download tool. There is a hard-coded limit of 500 maximum downloadable series (which can be lifted via the `limit()` option). In any case, the server only yields a maximum of 1000 series per query; [here are some work-arounds](#) 
- **To dos:**
  - ▶ Update the `dbnomics` command to support version 22 of the DBnomics API (released December 2018);
  - ▶ Add option to request specific versions of time series (both from the front-end and back-end);
- **Bugs?** s [dot] signore at eif [dot] org (or signoresimone at yahoo [dot] it);
- **Want to help?** Fork `dbnomics`'s repository on [github](#).
